

Ideas become **editable**.

A programmable design studio for AI agents. Create, check and deliver layered designs through MCP, CLI, Python or REST.

Create

Layouts, type, vector paths, shaped images, painting, pixel art and emoji artwork.

Animate

Keyframes, rigged character poses, cameras, audio and app-state packages.

Review

Design checks and saved suites, offline proof pages, live review and branching history.

Explain

Data-bound charts, diagrams, decks, rich documents and fillable PDFs.

Repeat

Typed recipes, variables, CSV-driven variants, reusable containers and templates.

Deliver

PNG, SVG, PDF, layered-pixel PSD, PPTX, HTML, GIF, WebP, MP4 and print exports.

Choose your way in

Windows: use the installer from GitHub Releases.

Developers: clone the repository and install with Python 3.11+.

Connect an agent: `vixl mcp --workspace . --tools core --schema slim`

Source-available under PolyForm Small Business 1.0.0. See LICENSE for eligibility.

Core authoring works locally; AI generation and vision require configured external providers.
