VIXL / A DESIGN ENGINE FOR AI AGENTS

Ideas become editable.

Programmable. Editable. Checked.
MCP · CLI · Python · REST

THIS DECK IS MADE WITH VIXL

THE CORE IDEA

Not a picture. A document.

01

Content

Text, paths, images, masks and effects. All still editable.

02

Structure

Groups, variables, pages, layouts and reusable parts.

03

History

Undo, checkpoints, branches and diffs. Go back in time.

Look before you export.

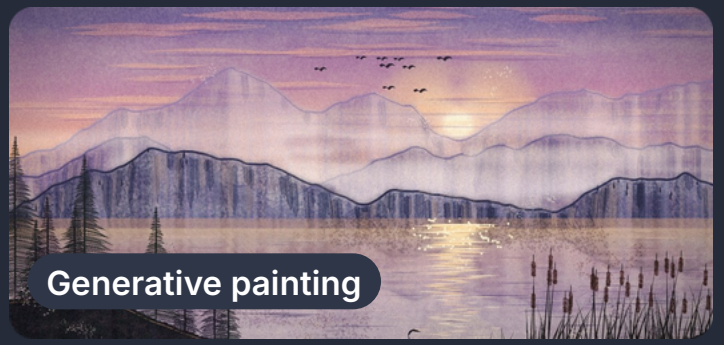

Read the canvas. Make atomic edits. Run the checks.
Look at the render. Then ship the files.

SAME ENGINE, VERY DIFFERENT JOBS

From print to pixels.

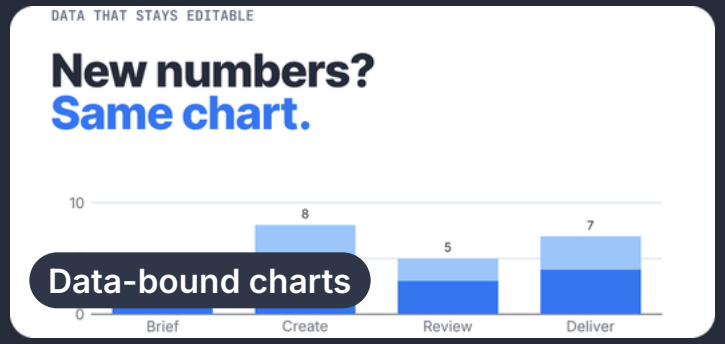

Print poster

Generative painting

Pixel-art game

Data-bound charts

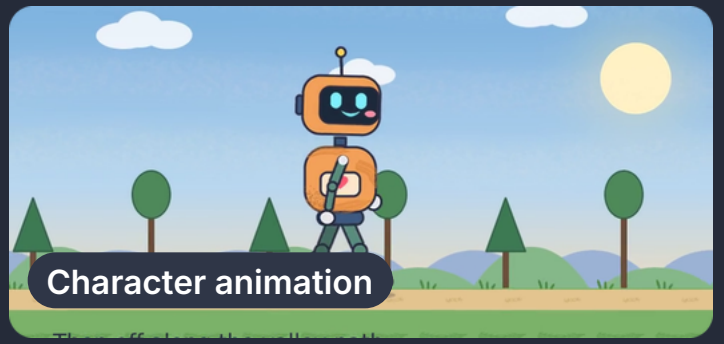

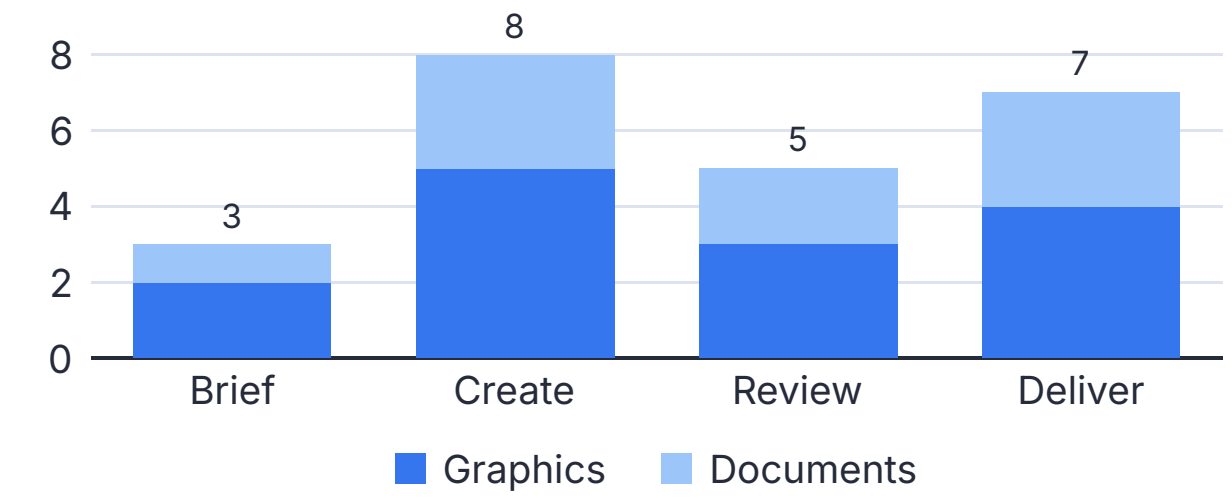

Character animation

Photo editing

Vixl

New numbers? Same chart.

ILLUSTRATIVE WORKFLOW DATA

Change the values with chart-data.

Scale, bars, labels and totals follow along.

In PowerPoint, hit Edit Data. It is all there.

CREATIVE AUTOMATION

One recipe. Plenty of posts.

- Typed inputs + variables
- Text fitting + saved checks
- CSV-driven batches
- Reusable containers and templates

Vixl

MOTION THAT SHIPS

Make it move.
Ship the states.

01

Author

Keyframes, motion recipes, posable characters, cameras and audio.

02

Export

GIF, animated WebP, APNG, MP4 and other timeline formats.

03

Integrate

App states, theme variables, transitions and reduced-motion stills.

CHECKED BEFORE IT SHIPS

Write the brief as tests.

01

Define

Turn margins, contrast and hierarchy into saved suites.

02

Inspect

Run the checks, read the findings, then actually look.

03

Share

Offline proof pages or a live REST review session.

REVIEWABLE WORK

Designs get code review too.

01

Git review

Readable JSON + assets through pack and unpack.

02

Shared work

Branches, explicit merges, project groups and shared libraries.

03

Portable files

Fonts and content travel inside the editable master.

FOUR WAYS IN

Same operations. Your tools.

01

MCP

Hand the workspace to your agent.

02

CLI

Script it, batch it, run it in CI.

03

Python

Generate designs from code and data.

04

REST

Plug it into web services.

A COMPLETE HANDOFF

Whatever format they asked for.

01

Screen

PNG, JPEG, WebP, SVG and icons.

02

Documents

PDF, fillable PDF, PPTX and HTML decks.

03

Print + motion

CMYK PDF/TIFF, GIF, WebP, MP4 and more.

YOUR TURN

Give your agent real layers.

terminal

```
git clone https://github.com/jxburros/Vixl.git
cd Vixl
python -m pip install -e '.[server,pdf]'
vixl mcp --workspace . --tools core --schema slim
```

Windows installer: GitHub Releases
