

VIXL / 0.19.0

Design is now an API call.

An editable image-document engine for AI agents. Swipe to see how it works.

THE PROBLEM

Design tools are built for hands, not agents.

■ Click-only editors

An agent cannot drag a slider it cannot see.

■ Flattened exports

One PNG back, and every layer is gone.

■ Guess-and-hope

No way to know the text overflowed until a human looks.

HOW IT WORKS

One loop. Every design.

01 **Inspect**
Read layers, bounds and fonts

02 **Apply**
Atomic batches of operations

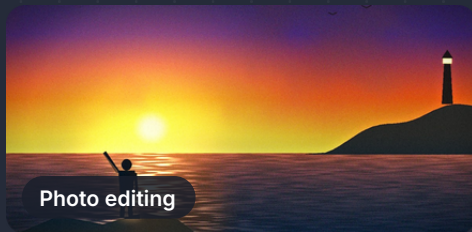

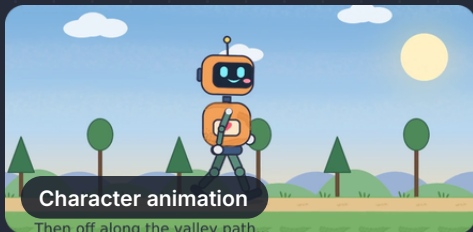

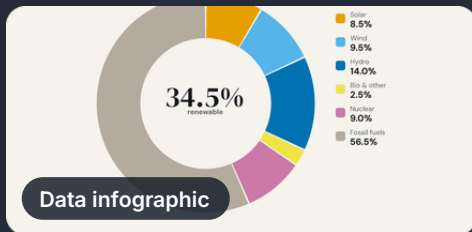

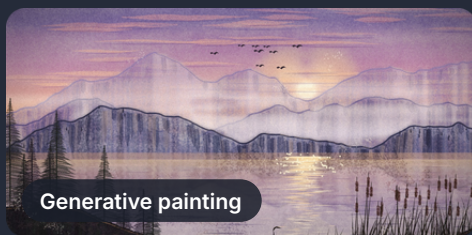

03 **Check**
Contrast, overlap, bounds, print

04 **Preview**
Render and look

05 **Export**
PNG, SVG, PDF, PPTX, MP4 ...

MADE WITH VIXL

Not a toy. A whole studio.

IN THE BOX

Batteries, included.

138

operations

32

layouts

14

finishing looks

150

named sizes

28

design styles

17

brushes

GET STARTED

Give your agent a design studio.

terminal

```
$ pip install -e '.[server,pdf]'
```

```
$ vixl mcp --workspace . \  
    --tools core --schema slim
```

```
# or Windows: Vixl-Setup.exe
```
