

The image editor your AI agent can **actually** use.

Create, inspect, edit, measure and export layered designs through MCP, CLI, Python or REST. No graphical display required.

How an agent works with Vixl

■ Stays editable

Text, shapes, masks, effects, variables, pages and history live in one portable .vixl master.

■ Speaks every interface

MCP for agents, a CLI for scripts, a Python API and REST, all sharing one set of operations.

■ Knows design

32 layouts, 28 styles, 14 finishing looks, curated font pairings and brand kits.

■ Checks itself

Overflowing text, low contrast, overlaps, missing glyphs and thin ink are caught before export.

■ Ships real files

PNG, SVG, vector PDF, CMYK print, editable PPTX, HTML decks, GIF, WebP and MP4.

■ Goes beyond posters

Charts from data, diagrams from text, fillable forms, pixel art, brushes and keyframe animation.

Hello, Vixl in Python

```
hello.py

from vixl import Project
p = Project(800, 600, background="#18283b")
p.apply([{"type": "text", "text": "Hello, Vixl"}])
p.export("hello.png")
```
