Tool you used

Claude

2 Plan

What task will you try? Keep it low-risk.

Summarise a 12-page public consultation into five bullet points for my manager.

If the AI gets it wrong, how much does it matter?

Hardly at all

Somewhat: I will check carefully

A lot: pick another task

3 Try

Your first prompt, exactly as you typed it

Summarise this document.

Your improved prompt: add context, format, an example

You are helping a busy operations manager. Summarise the attached public consultation in five plain-language bullets, then list two questions it leaves open. Flag anything you are unsure of.

4 Reflect

What changed, and what did you have to fix?

The second prompt gave a usable summary first time. It flagged one statistic it could not verify; the source showed a different figure, so I corrected it.

Usefulness, 1 to 5

4

Minutes saved (estimate)

35

I checked the facts

I kept personal data out

I would use it again

My first AI experiment

Pick one low-risk task, try two prompts, and note what changed. Type in this PDF or print it.

2 Plan

What task will you try? Keep it low-risk.

Draft three subject lines for the quarterly newsletter.

If the AI gets it wrong, how much does it matter?

Hardly at all

Somewhat: I will check carefully

A lot: pick another task

3 Try

Your first prompt, exactly as you typed it

Write subject lines for our newsletter.

Your improved prompt: add context, format, an example

Write six subject lines under 50 characters for a finance team newsletter about new expense rules. Friendly, no puns, no exclamation marks.

4 Reflect

What changed, and what did you have to fix?

Adding the audience and the constraints removed the generic options. I combined two of them.

Usefulness, 1 to 5

5

2 Plan

What task will you try? Keep it low-risk.

Explain the difference between machine learning and rules-based automation for a training slide.

If the AI gets it wrong, how much does it matter?

☐

Hardly at all

☒

Somewhat: I will check carefully

☐

A lot: pick another task

3 Try

Your first prompt, exactly as you typed it

What is machine learning?

Your improved prompt: add context, format, an example

Explain machine learning versus rules-based automation to new staff with no technical background, in under 120 words, with one everyday example of each.

4 Reflect

What changed, and what did you have to fix?

Much clearer. I still rewrote the example to match our own systems and asked IT to review it.

Usefulness, 1 to 5
