

Responsible AI use at work

Nine habits and one rule for everyday use of AI tools. A starting point: adapt it to your organisation's own policy.

The traffic-light rule for data

Before you paste anything into an AI tool, decide which colour it is.

GREEN

Public

Published web pages, press releases, general questions with no private detail. Fine in approved tools.

AMBER

Internal

Drafts, internal processes, figures that are not sensitive. Approved tools only, with care.

RED

Confidential

Names, health or HR records, client data, passwords, unreleased results. Never in AI tools unless your policy explicitly allows it.

Nine habits

Tick them off until they are automatic.

Before you start

- ☐ Use a tool your organisation has approved for the task.
- ☐ Decide what a good result looks like and who will check it.
- ☐ Remove names, contact details and client or patient data.

While you work

- ☐ Give context and ask for sources or reasoning you can verify.
- ☐ Treat every answer as a draft, not a decision.
- ☐ Stop if the output is offensive, biased or off-topic.

Before you share

- ☐ Check facts, figures, quotes and links against the source.
- ☐ Make sure the final wording and judgement are yours.
- ☐ Say that AI helped, where your team expects it.

When in doubt, leave it out. Ask your manager or your data-protection lead before you paste it.
