VIXL / 0.21.0

Design is now an API call.

An editable image-document engine for AI agents. Swipe to see how it works.

vixl

THE PROBLEM

Design tools are built for hands, not agents.

- **Click-only editors**

  An agent cannot drag a slider it cannot see.

- **Flattened exports**

  One PNG back, and every layer is gone.

- **Guess-and-hope**

  No way to know the text overflowed until a human looks.

vivl

HOW IT WORKS

One loop.
Every design.

01 **Inspect**
Read layers, bounds and fonts

02 **Apply**
Atomic batches, up to 10,000 ops

03 **Check**
Contrast, overlap, bounds, print

04 **Preview**
Render and look

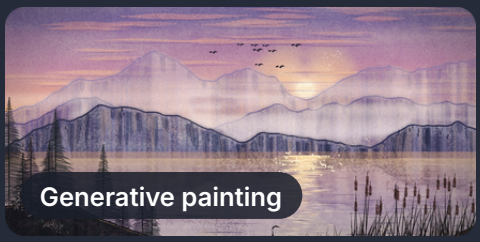

05 **Export**
PNG, SVG, PDF, PPTX, MP4 ...

vixl

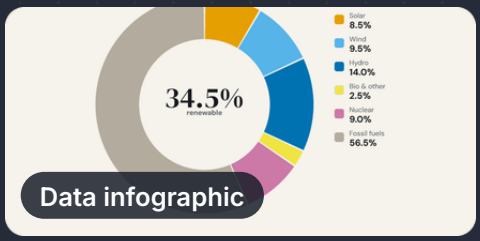

MADE WITH VIXL

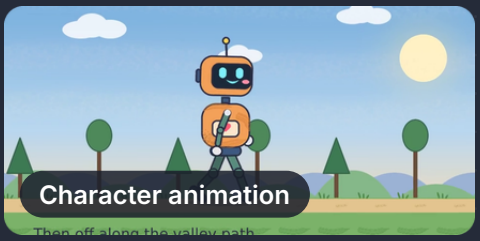

Not a toy.
A whole studio.

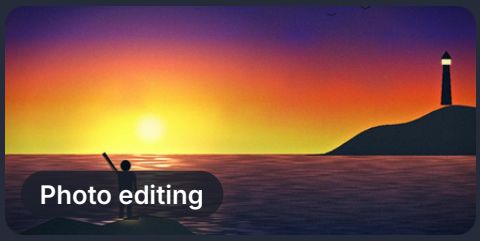

IN THE BOX

Batteries, included.

180
operations

150
named sizes

47
layouts

40
templates

28
design styles

17
finishing looks

GET STARTED

Give your agent a design studio.

terminal

```
$ pip install -e '.[server,pdf]'
$ vixl mcp --workspace . \
    --tools core --schema slim

# or Windows: Vixl-Setup.exe
```

github.com/jxburros/Vixl
