vixl

PRODUCT SHEET / 0.21.0

The image editor your AI agent can actually use.

Create, inspect, edit, measure and export layered designs through MCP, CLI, Python or REST. No graphical display required.

How an agent works with Vixl

01 Inspect — Read layers, bounds and fonts

02 Apply — Atomic batches, up to 10,000 ops

03 Check — Contrast, overlap, bounds, print

04 Preview — Render and look

05 Export — PNG, SVG, PDF, PPTX, MP4 ...

Stays editable

Text, shapes, masks, effects, variables, pages and history live in one portable .vixl master.

Checks itself

Overflowing text, low contrast, overlaps, missing glyphs and thin ink are caught before export.

Speaks every interface

MCP for agents, a CLI for scripts, a Python API and REST, all sharing one set of operations.

Ships real files

PNG, SVG, vector PDF, CMYK print, editable PPTX, HTML decks, GIF, WebP, MP4 and WAV.

Knows design

47 layouts, 40 templates, 28 styles, 17 finishing looks, safe palettes and font pairings.

Goes beyond posters

Editable vector paths, charts, diagrams, fillable forms, pixel art, character animation and sound.

Hello, Vixl in Python

hello.py

```python
from vixl import Project
p = Project(800, 600, background="#18283b")
p.apply([{"type": "text", "text": "Hello, Vixl"}])
p.export("hello.png")
```
