

MYTH #1

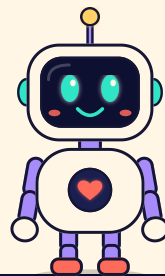

~~"AI understands things the way people do."~~

BUSTED

THE TRUTH

Today's AI is a pattern-finder. It learned from huge amounts of examples, so it can sound sure of itself without understanding, or being right.

→ Treat answers as a smart first draft.

MYTH #2

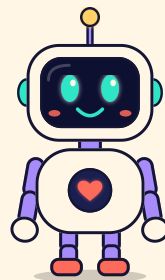

~~"If an AI says it, it must be true."~~

BUSTED

THE TRUTH

AI can confidently make things up. People call this a hallucination. It happens most with facts, numbers, quotes and sources.

→ Check anything important with a trusted source.

MYTH #3

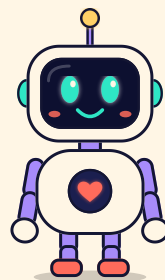

~~“You have to code to use AI.”~~

BUSTED

THE TRUTH

Plain language works. Say what you want, who it's for and what good looks like, then refine it together.

→ Try: “Explain this like I'm 12.”

MYTH #4

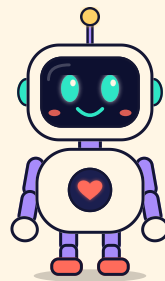

~~“AI is neutral and fair.”~~

BUSTED

THE TRUTH

AI learns from human-made data, and that data carries our gaps and biases. Some outputs reflect them.

→ Ask: who might this leave out?

MYTH #5

~~“AI will do all the thinking for us.”~~

BUSTED

THE TRUTH

AI is a tool. It speeds up drafts, ideas and practice. Judgment, values and taste stay with you.

→ Use it to think more, not less.
