vixl

Ideas become editable.

A design engine for AI agents. Your agent makes it, you keep the layers, Vixl checks the work. Through MCP, CLI, Python or REST.

Create

Layouts, type, vector paths, shaped images, painting, pixel art and emoji. Text stays text.

Explain

Charts from real data, routed diagrams, decks with notes and PDFs people can fill in.

Animate

Keyframes, posable characters, cameras, audio and app states that ship with stills.

Repeat

Typed recipes, variables and a CSV: one design becomes a whole campaign.

Review

Checks, saved suites, proof pages and branching history. Catch it before the printer does.

Deliver

PNG, SVG, PDF, layered-pixel PSD, PPTX, HTML, GIF, WebP, MP4 and print. Plus the master.

Pick your way in

Windows: use the installer from GitHub Releases.
Developers: clone the repository and install with Python 3.11+.
Connect an agent: vixl mcp --workspace . --tools core --schema slim

Source-available under PolyForm Small Business 1.0.0. See LICENSE for eligibility.
Core authoring works locally; AI generation and vision require configured external providers.
