A DESIGN ENGINE FOR AI AGENTS

Ideas become editable.

Your agent makes the poster. You keep the layers. Nobody redraws it from scratch.

HERE IS HOW →

NOT A FLAT PNG

Change it.
Keep the file.

Live text + vectors

Fix a typo without redrawing the poster.

Reusable ingredients

Variables, templates, containers. Make once.

Reviewable source

Unpack to JSON and diff it in Git. Really.

FROM BRIEF TO FILE

Build. Check. Look. Deliver.

01 **Inspect**
See what is really on the canvas

02 **Apply**
Atomic edits: all or nothing

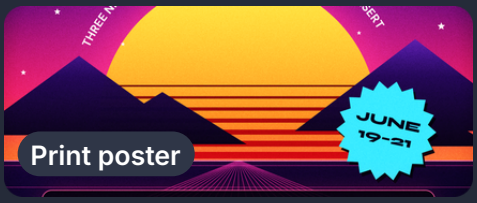

03 **Check**
Contrast, spacing, bleed, your rules

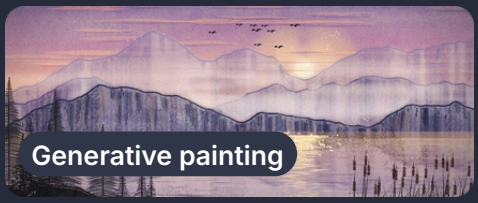

04 **Preview**
Look at it like a person would

05 **Export**
PNG, SVG, PDF, PPTX, MP4 ...

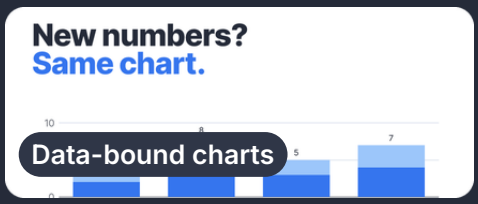

ALL MADE WITH VIXL

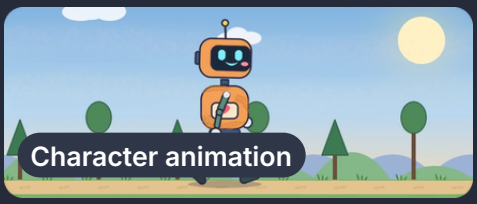

Yes, all of this is Vixl.

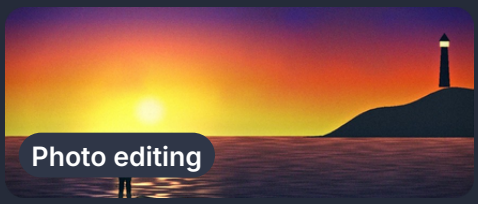

MAKE ONCE. PUT IT TO WORK.

More than one picture.

01 **Campaigns**

One recipe, many checked variants.

02 **Documents**

Real PPTX charts. PDFs you can fill in.

03 **Motion**

App states, themes, reduced-motion stills.

YOUR TURN

Give your agent real layers.

Install it, point your agent at MCP, or drive it yourself from the CLI, Python or REST.
